3Q FY20/12
Results Briefing

November 13, 2020

Sodick Co., Ltd.

I. 3Q FY20/12 Financial Results Summary

II. FY20/12 Financial Results Projections

III. Shareholder Return Policy

(Reference Materials)

Financial Results Highlights

- ✓ Due to the impact of the COVID-19 pandemic, sales of electrical discharge machines (EDMs) decreased sharply.
- ✓ Operating income fell about 70% from the same period of the previous year, mainly on account of a decline in the profitability of the plants associated with a decrease in production volume.

Financial Results Highlights (Quarterly)

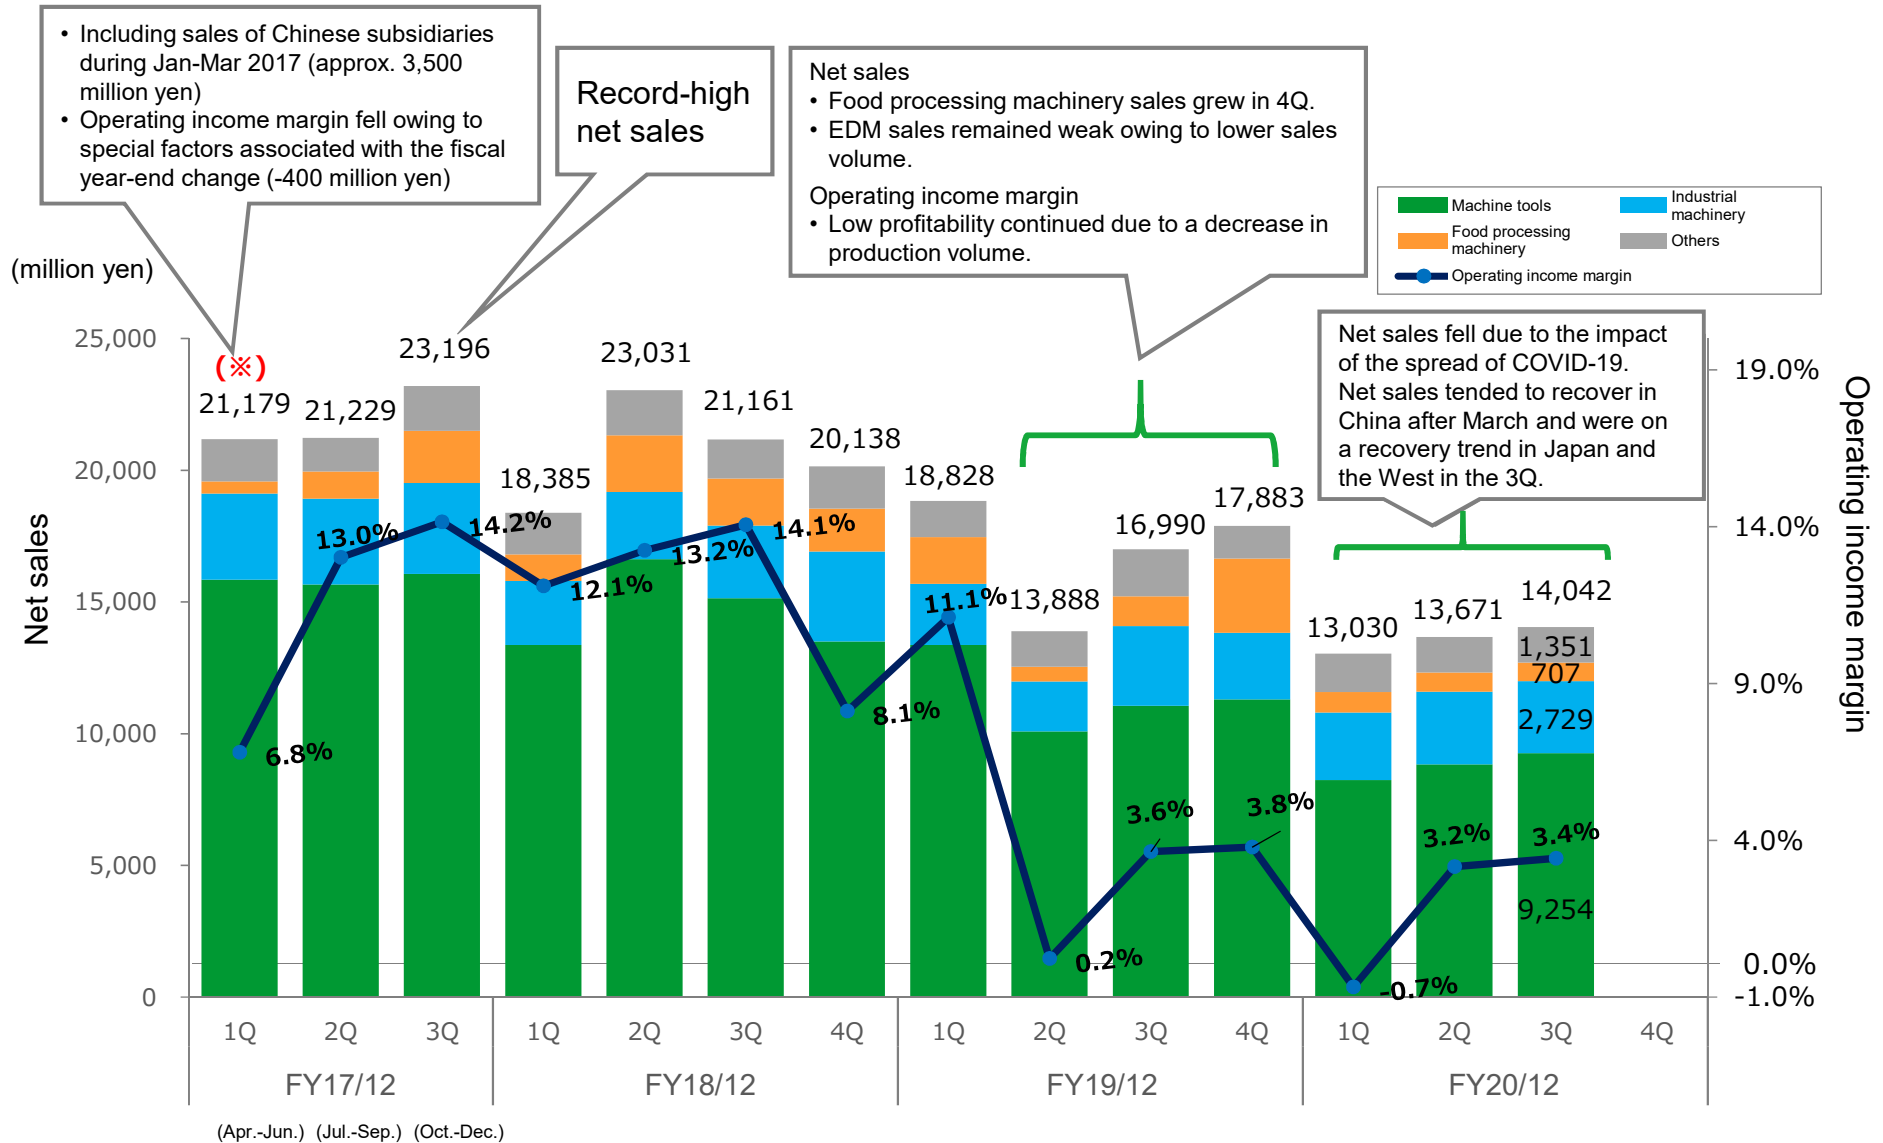

- ✓ Sales of electrical EDMs increased in the third quarter due to the resumption of business activities in Japan and the West following cancellation of the declaration of a state of emergency and the release of lockdowns.
- ✓ Current net income increased due to the posting of tax effects on tax loss carryforwards (approx. 250 million yen).

Ratio of Operating Income to Net Sales (Quarterly)

(*) Owing to irregular settlement of accounts resulting from the fiscal year-end change, figures for the Jan-Mar period of 2017 for companies in China whose fiscal year ends on December 31 are included.

Details of Changes in Operating Income

- ✓ Sodick had operating income of 827 million yen owing to a substantial fall in gross profit due mainly to a decrease in net sales, although SG&A expenses fell by about 1.7 billion yen as a whole owing mainly to a decrease in travel expenses resulting from restriction of business trips, a decrease in promotion/advertisement expenses resulting from cancelled exhibitions, and a decrease in personnel expenses resulting from decreased overtime work.

Financial Results by Segment

(million yen)

Machine Tool Segment

Net sales

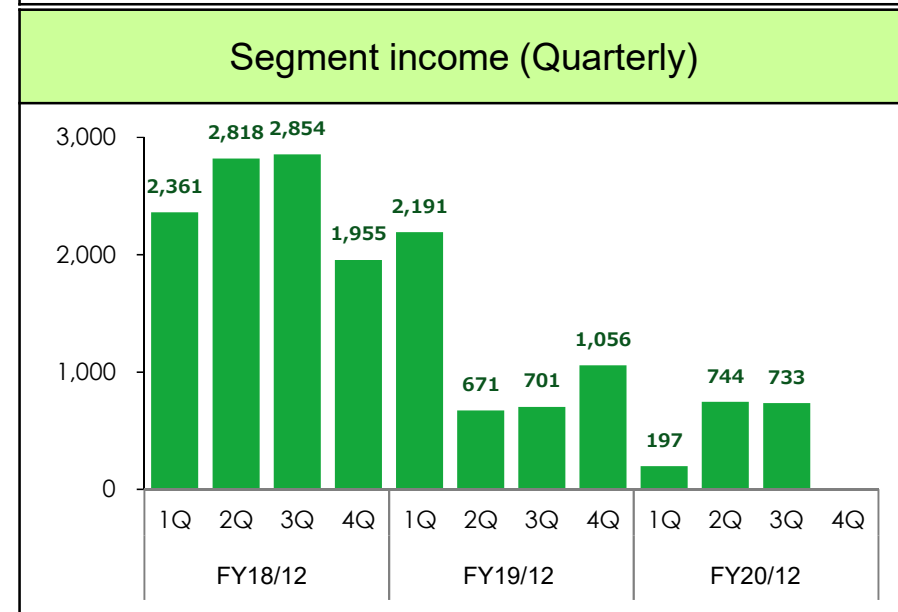

- Net sales fell substantially from the same period of the previous year, as there was a global tendency to postpone product shipment and facility investments in a wide range of industries, including automotive, electronic component, and aerospace industries, due to the impact of the spread of COVID-19.
- Net sales for the 3Q rose compared with the 2Q. Business activities in China, which returned in March, continued to recover, and sales of EDMs in Japan and the West have been on a recovery path as business activities resumed following cancellation of the declaration of a state of emergency and the release of lockdowns.

Segment income

- Segment income plummeted from the same period of the previous year, chiefly on account of a decrease in cumulative net sales of 3Q as well as a drop in profitability of the plants associated with a decline in production volume.

(million yen)

	3Q FY19/12 (cumulative)	3Q FY20/12 (cumulative)	YoY change	
			Amount	Rate
Net sales	34,498	26,317	-8,180	-23.7%
Segment income	3,564	1,675	-1,889	-53.0%

Financial Results by Segment

(million yen)

Industrial Machinery Segment

Net sales

- A situation where economic activities were restrained continued due to the impact of the global spread of COVID-19.
- Net sales rose from a year earlier thanks mainly to a demand for products for next generation auto-related industries, such as CASE, in addition to projects for 5G smartphone antenna components and for lenses.
- On the other hand, a lull was seen in the most recent order receiving, and the prospects of the situation are unpredictable.

Segment income

- Segment income improved substantially from the same period of the previous year, owing to the sustained sale of high value-added products.

(million yen)

	3Q FY19/12 (cumulative)	3Q FY20/12 (cumulative)	YoY change	
			Amount	Rate
Net sales	7,242	8,045	802	11.1%
Segment income	218	370	152	69.6%

Financial Results by Segment

(million yen)

Food Processing Machinery Segment

Net sales

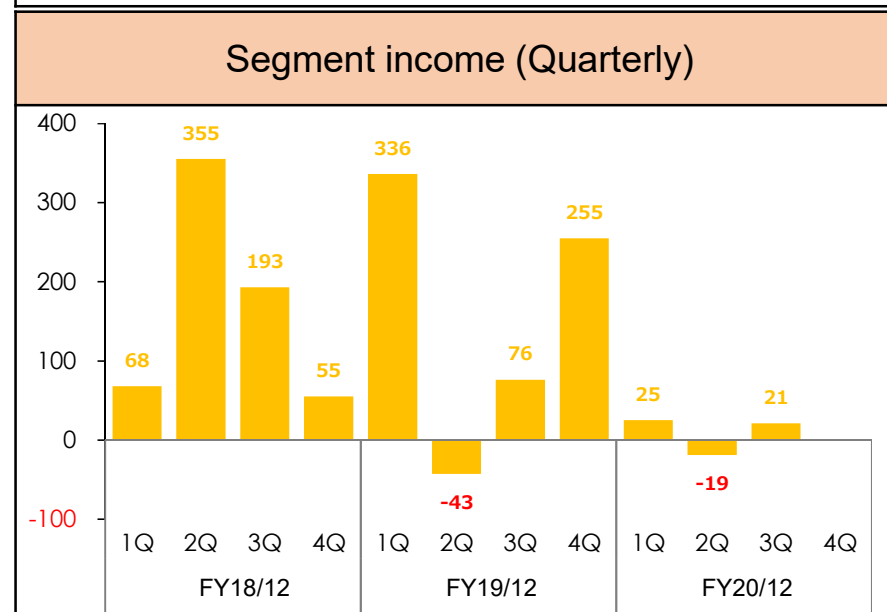

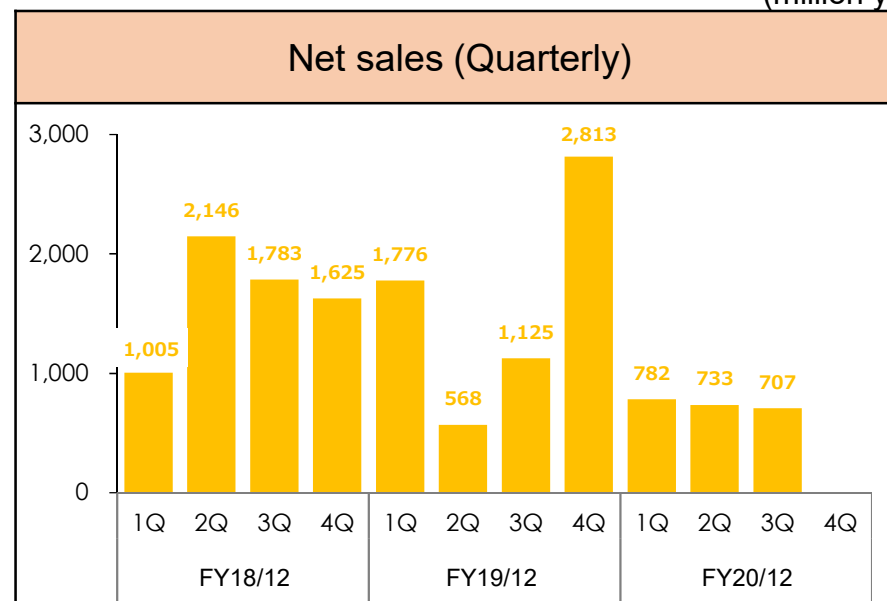

- There was a continuous demand for sanitary equipment and equipment to respond to manpower reduction and a growing demand related to nest-dweller consumption resulting from refraining from going outside.
- Sales fell substantially from the same period of the previous year because sales are expected to be concentrated in the fourth quarter and because sales activities were delayed and facility investments were postponed due to the spread of COVID-19.

Segment income

- Segment income remained low due to sluggish sales.

(million yen)

			Amount	Rate
Net sales	3,470	2,223	-1,246	-35.9%
Segment income	369	27	-342	-92.6%

Financial Results by Segment

(million yen)

Other Segments

Net sales

- In the precision die and molding business, demand in the automotive industry is moving to pick up, but the future is still uncertain.
- Demand for ceramics is recovering due to an increase in demand for telecommunications-related equipment such as telework equipment in response to the spread of COVID-19.

Segment income

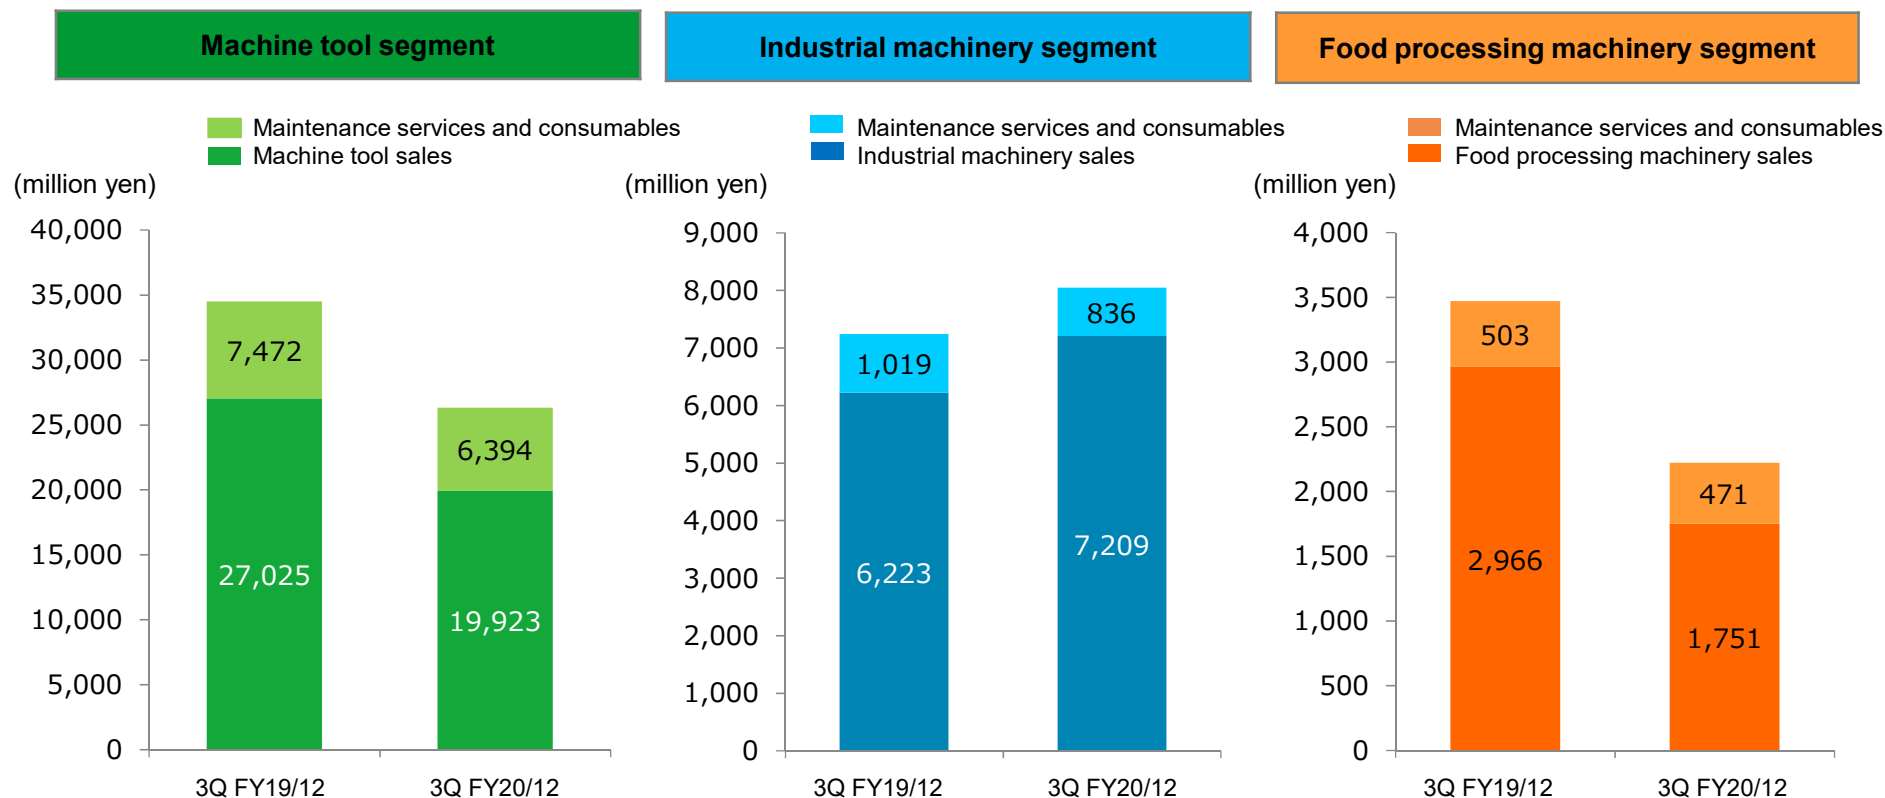

- Segment income tended to recover a little from a year earlier, in which profitability deteriorated due to business environment deteriorated and R&D investment but remained sluggish.

Development of inert gas dissolved injection molding system for biodegradable plastics INFILT-V

齋藤1

The problem with the molding of biodegradable plastics is that they have high viscosity when melted and are difficult to mold. To solve this problem, we have developed a new system "INFILT-V" that directly injects inert gas from an injection plunger that fills a mold with resin material.

By injecting the inert gas directly into the injection plunger, the gas is dissolved in the resin material, and the viscosity of the resin material is reduced. By utilizing this phenomenon, it is possible to stably fill a thin-walled molded article with resin material, which was difficult before this.

Photo 1.

Left: Standard Molding Right: Using "INFILT-V"

▲ Molding example of injection molding machine units equipped with INFILT-V system

2

Development of ultra-high speed small-hole drilling EDM K4HL

In recent years, small-hole drilling EDM are required to respond to higher level of difficulty in machining not only for the start hole machining for wire-cut EDM, but also in various fields such as aerospace, energy, automotive, medical equipment, electrical machinery, and the electronics industry, such as narrow and deep holes that are difficult to machine with drills, holes with few deteriorated layers, holes with no burrs at the exit, etc.

The newly developed "K4HL" contributes to high-precision and high-efficiency production by equipping all 3 shafts with linear motors, which were previously used only in the main shafts of existing machines, as standard equipment, as well as expanding the functions of the electrode feeder and installing an automatic electrode changer.

3 Development and sales of a large double shaft mixer for producing instant noodle dough TM350-W

A large double shaft mixer, which is a machine for producing noodle dough by kneading flour and water, is capable of mixing powder and water equally with two beating shafts fixed to produce noodles of high quality. It is a large machine capable of beating 350 kg flour at a time to allow mass-production of noodles.

We will promote the sale of the mixer after this to gain a share of the instant noodle market on the expectation that demand will grow in that market in and outside Japan.

▲ Large double shaft mixer TM -350 W

4 Development and supply of a face shield frame Face Tech

We have developed a frame Face Tech for a full-fledged face shield, which is useful for the prevention of COVID-19.

Face Tech is made of resin and features a smooth shape and texture with excellent fit thanks to the high molding accuracy of in-house molds utilizing our company's metal 3D printer technology. The shield section can be used with commercially available stationery and daily necessities, and has a structure that allows easy removal, replacement, and disposal, and is excellent in hygiene.

As part of our CSR activities, we donated and supplied these to medical, public, and sports-related facilities and organizations.

▲ Face Tech

Status of Responses to the Spread of COVID-19

✓ Status of operations at our major sites is as shown below (as of November 13)

Site	Operation status
Japan	Partially restrict the use of public transportation and continue to promote working at home Lay employees off for several days from August to December
The West	Have employees go to the office and work at home in rotation
China	Normal operation
Asia	Almost normal operation Adjust operating days at the Thailand Plant in line with reduced demand

✓ Responses at the Sodick Group

- Keep proper stock level through production adjustment in line with reduced demand (operating day adjustment at the Thailand Plant)
- Conduct a drastic review of the supply chain, including a review of suppliers and pushing ahead with insourcing
- Lay off our all employees in Japan
- Be thorough in cost reductions at the whole company level
- Reduce salaries in some Group companies
- Prohibit business trips (at home and abroad), as a rule
- Promote working at home, staggered working hours, and the use of the web conference system
- Give special vacations for special school closures
- Push ahead with business activities making use of web exhibitions and the like
- Be thorough in safety and health measures (e.g. mask wearing, taking temperature, disinfection with alcohol, restricted cafeteria use hours, and refraining from contacting with the outside)
- Produce face shield frames, distribute them to employees, and supply them to medical organizations various public institutions, sports-related facilities and organizations

(Reference Materials)

Market Environment

- ✓ Japan: Although there are government subsidy policies and potential demand, such as replacement demand for aging equipment, the future is uncertain due to a decline in facility investment sentiment and a tendency to refrain from investment due to the spread of COVID-19.
- ✓ North America and Europe: Concerned about the impact on business activities from the re-expansion of COVID-19. Although the auto-related industries are on a recovery trend, the aerospace industry is expected to face difficult conditions.
- ✓ China: Although a tendency to recover has continued since March, prospects remain unpredictable due mainly to the global spread of COVID-19 and worsened relations between the US and China. However, a demand for high-precision machines is expected to continue in a medium-to-long period thanks to growing needs for advanced and automated manufacturing.
- ✓ Asia: Although economic conditions differ from region to region, the situation is expected to remain tense due mainly to restrictions of movement in some regions.

FY20/12 Full-year Financial Results Projections (Compared with Original Projections)

- ✓ In consideration of the better-than-expected results for the cumulative third quarter and the current business environment, the full-year projection announced on August 7 was revised upward.

Machine tool segment

- ✓ Although there is a potential demand for high-precision machines in the automotive and other fields mainly in China, thanks to the advancement of manufacturing technology, the situation is uncertain, due mainly to restricted economic activities owing to the impact of the global spread of COVID-19.

Industrial machinery segment

- ✓ There is a lull in the most recent order receiving, and the situation is expected to be a little tense.

Food processing machinery segment

- ✓ Major sales are expected to concentrate in Q4.
- ✓ Although demand for both noodle making machines and rice-related equipment continues, there are several cases in which sales will be postponed to the next period due to delays in business activities and postponement of facility investments due to the spread of COVID-19.

Other segments

- ✓ Ceramics business is on a recovery trend, but molding operations remain uncertain.

* Full-year financial results projections by segment have been revised in part owing to a revision of financial results projections
